An Open Letter.

We desire to say that our business since January 1st has passed the mark anticipated. We wish to be frank, therefore we are not attempting to talk to business people and put it in the form of a polished sheet. The advantage of having merchandise different from your competitors is apparent, provided that the retailer is known to his customers. Do not do a good deal of advertising appear to you as though the advertisers were indulging too freely in fine words? Most of them seem to say something that means nothing. Names are invented for goods that have no bearing whatever on the materials, turned and twisted until they are no longer relevant, all of which is done to tone the product, because the product hasn't goods. We are strong believers in advertising because it is a good thing, but advertising doesn't pay unless constructed on a proper basis, and that is to plainly tell people what you have to sell, and sell it as low as is consistent with legitimate business methods.

Our spring importation of Dress Goods, White Goods, Carpets, Mattings and Housekeeping Goods generally is complete. Come and learn just what will be found to be as cheap as the cheapest, quality considered. Successful.

Dr. Dudgeon, who died recently in Pekin, was perhaps the best-known of all the Europeans in China, with exception of Sir Robert Hart. He went out early in the 60s to take charge of the British Legation Hospital, and the walls of the hospital are adorned with tablets testifying to his surgical skill. For twenty years the doctor was daily at his post, receiving all sorts and conditions of Chinamen, and at times his patients numbered a hundred a day. He had the confidence of the best Chinese statesmen.

New process discovered at Pittsburgh threatens to revolutionize the manufacture of armor-plate. The Carlin Steel Company believes that it has solved the problem of cheaper armor-plate. J. W. Anderson, general superintendent of the company, has been at work for a number of years on a secret process of manufacture, and word from a reliable source is that recent experiments made by him were entirely successful, and confirmed his faith in the new process. If the invention is a success, and they claim it is, there will be a great fall in the price of these plates.

How to stop the Indians of the South Dakota reservations from eating each other's food is an amusing, but perplexing, problem, with which the Indian Bureau is now dealing. It is an unenviable task, for the hospitality that a guest may stay as long as he like and that as long as the guest remains the host must provide the food. It has become the custom among the Sioux, who have a feast with their two weeks' ration as soon as they receive it from the Government, to go to the more provident Indians and live on them until all their food is gone.

The Page of the Pipe at Windsor Castle holds a hereditary office which dates back to Charles II. That merry monarch acquired the tobacco habit from some of his Virginia colonists, and required a page who was paid a salary of \$600 a year to keep his smoking apparatus in order. In a moment of generosity his majesty made the appointment permanent. Until 1785 the honor was held by the Duke of Grafton, who got hard up and sold to a merchant named Harrison. As Queen Victoria did not smoke, the office was a sinecure, but the descendants of Harrison are entitled to the privilege of entering the presence of their sovereign at any time.

Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and the patient is cured.
